

# Combination Housing

## Catalog # 34609

The racks shown on this page have 32" tall cages on the top, and 36" tall cages on the bottom. The rack can fit through a standard doorway. Different sizes of cages are available for top or bottom.

Dividers are installed in slide tracks attached to each cage.

Each cage is easily removable from the rack.

Each cage has perch and squeeze system.

The rack has pre-piped automatic watering system, one fitting penetrating the back of each cage.

The watering system is complete with quick disconnect fitting and drain valve.

The sloping stationary waste tray (for wet system) drains into a gutter in the floor.

The lower waste tray (for wet system) discharges directly into the gutter in the floor.

A wall lock mechanism secures the rack and cages to the wall. A bumper contacts the wall.

A shallow pan (for dry bedding) can easily be positioned and removed from under each cage.
