

# Floor Cartridge

## Catalog # 39964

The Removable Telescoping Floor Cartridge is a specially designed feature for a One over One Socialization Rack. The Floor Cartridge is made to fit into the mid-section of a Socialization Rack.

The front half of the wire floor telescopes back allowing access between the top and bottom of the Socialization Rack.

The sloping waste tray allows waste to drain in the open or closed position.

Handles are provided for easy installation and removal.

A seaboard plastic bottom provides a lightweight bearing surface to slide the Floor Cartridge out of the Socialization Rack.

Custom sizes are available.

Carter2 Systems, Inc. will retrofit the use of existing floor cartridges that don't provide the telescoping floor feature.
